The 1962 Volume of Transactions contains pages representing the areas of interest of the Extractive Metallurgy Division, the Institute of Metals Division, and the Iron and Steel Division. Transactions has become the most used reference volume for the metallurgical profession, and as a service to membership and the profession, The Metallurgical Society has assumed a deep responsibility to maintain the quality, quantity, and breadth of coverage of this publication.

Increasing costs of publication and the growing opportunity to publish important papers within the limitations of our budget have required the greatest diligence of the reviewers, the editor, the staff, and the Publications Committee. We gratefully acknowledge the contributions from the steel companies during the current year which have been added to the principal of our Publications Fund. During the terms of previous Presidents of the Society, plans were conceived for an Annual Conference on Process Metallurgy which, it is hoped, will relieve to some extent the financial pinch when this program can be initiated, possibly in 1965.

Active committee efforts are under way to consider the overall publications policies and problems of the society in order to ensure that our responsibilities to the membership and the profession will continue to be fulfilled.
